Art Unit: 1742

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to steel sheet defined by its precipitation density and its method of making, classified in class 148, subclasses 603, 533 and 320.
- II. Claims 17-25 and 31 to 39, drawn to a steel sheet defined by equations and its method of making, classified in class 148, subclasses 603, 533 and 320.
- III. Claims 26-30, 40, and 41, drawn to steel sheet defined by alloying constituents and its method of making, classified in class 148, subclasses 603, 533 and 320.

The inventions are distinct, each from the other because of the following reasons:

Inventions of group I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions define a different steel alloy composition. Group I is directed to steel alloys defined by precipitation density location, Group II is directed to steel alloys defined by equations, and Group III is directed to steel alloys defined by only its alloying constituents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
